

LaterDude Pro

v2.0.49

By Fabian Heuwieser

What is LaterDude Pro?

LaterDude Pro is an application that simply reminds you to call, SMS or email someone. The efficiency of it is that it interacts with the system and creates a new event in the internal calendar application.

How do I use LaterDude Pro?

After installation, **LaterDude Pro** is available for use on your device. It does not have an icon but is always present on your system via the Menu. You click on Menu -> Remind me later! to access the application.

You can access **LaterDude Pro** from everywhere, but if you are in the following applications then you can invoke the current entries:

- Call Log
- Messages/email Application
- SMS Application
- Address Book

From these 4 applications you can select an entry to directly get its contents imported into the fields of **LaterDude Pro**. For example if you want to get notified tomorrow that you have to contact your Doctor, you go into the Address Book, scroll to your Doctor's entry, press Menu -> Remind me later! to set up a call-back reminder. The phone number and name is then already set in the **LaterDude Pro** application. Simple and efficient!

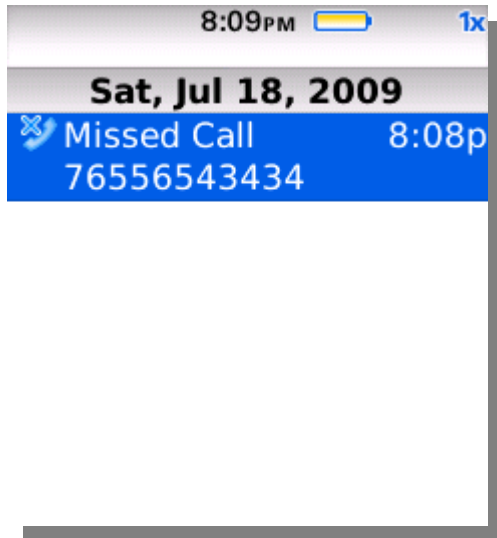

What if it doesn't work?

If **LaterDude Pro** doesn't work please check the following settings:

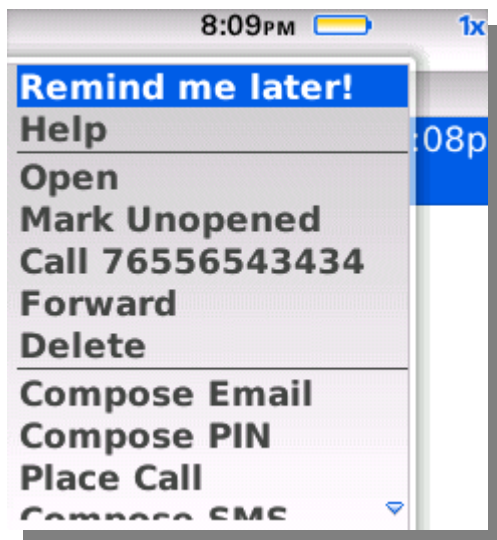

- Did you set the permissions for the application to allow? Go to Options -> Advanced Options -> Applications -> **LaterDude Pro** -> Menu -> Set Permissions -> Set all to Allow -> Reboot the device now (battery-pull).
- The Call Log has to be displayed in the Phone Screen when you click the Green Phone Key. Set it here: Green Key -> Options -> General Options -> Phone List View: Call Log
- You need to take make the following settings:
Open up the Calendar, go to Menu and then Options. Then 'General Options', then go to 'Default Reminder' and set it to 0min so that the Reminder is always on 0min.

Screenshot-Walkthroughs

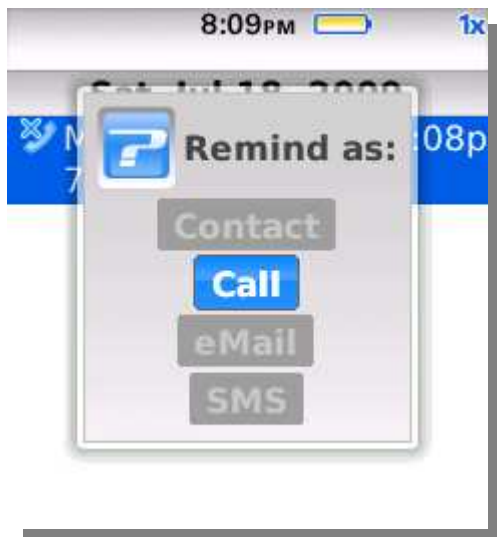

Via the Messages Application:

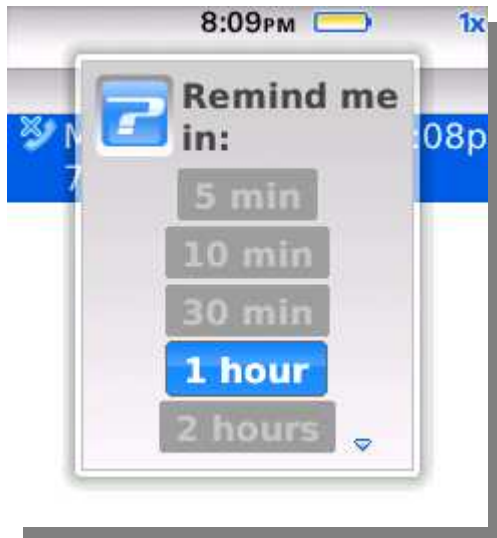

In the Message Application, select an Entry

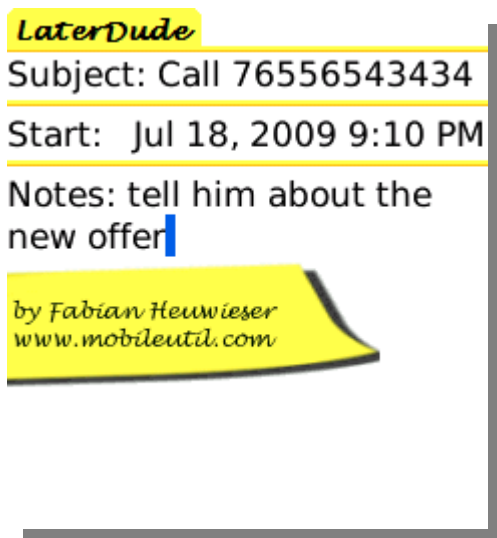

The select Menu -> Remind me later!

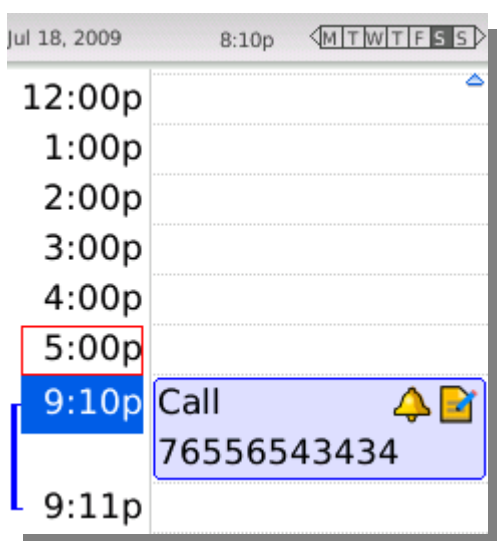

Select as what you want to get notified

Select the time when you want to get notified. You can still edit the time in the next screen in the Time-Selector.

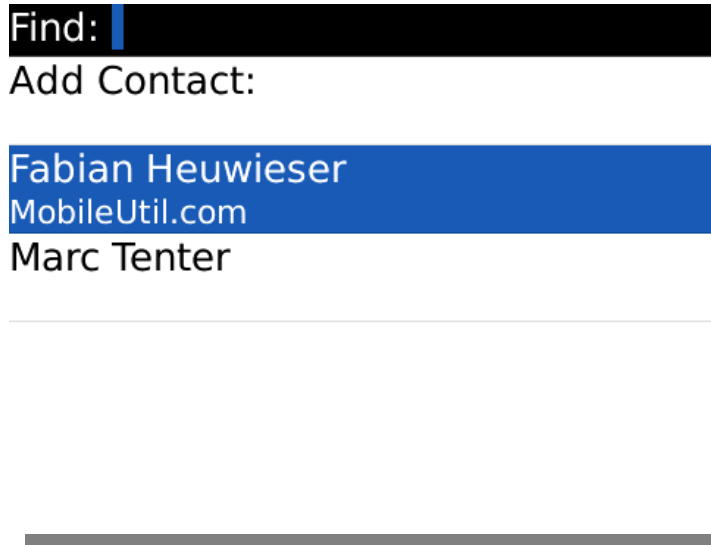

Now in the LaterDude Pro Screen you can edit the fields with your values. You can still edit the time and date and the notes and when you are finished, press the 'Return' Key (left of your Red Key). Click on 'Save' and your Event gets added to the Calendar.

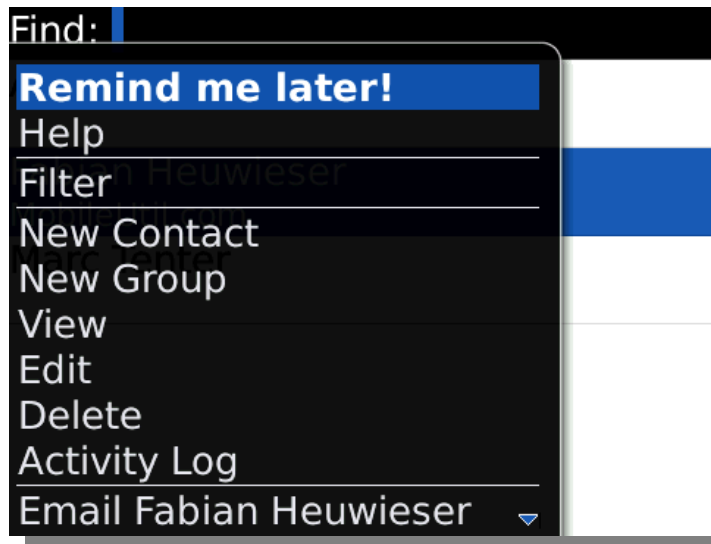

Here in the internal Calendar Application you can see the event.

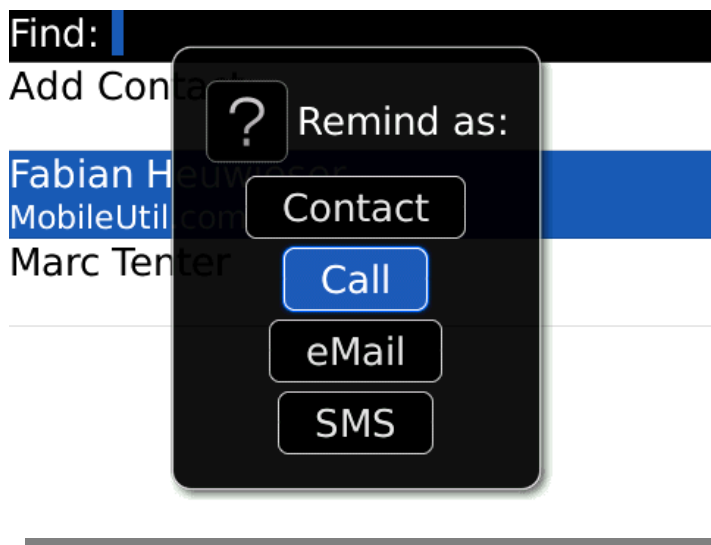

Via the Address Book:

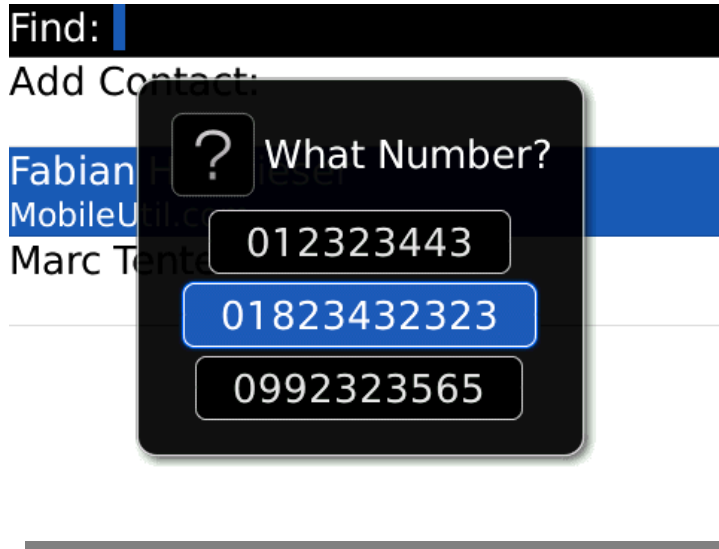

From the List of Contacts you can invoke the numbers

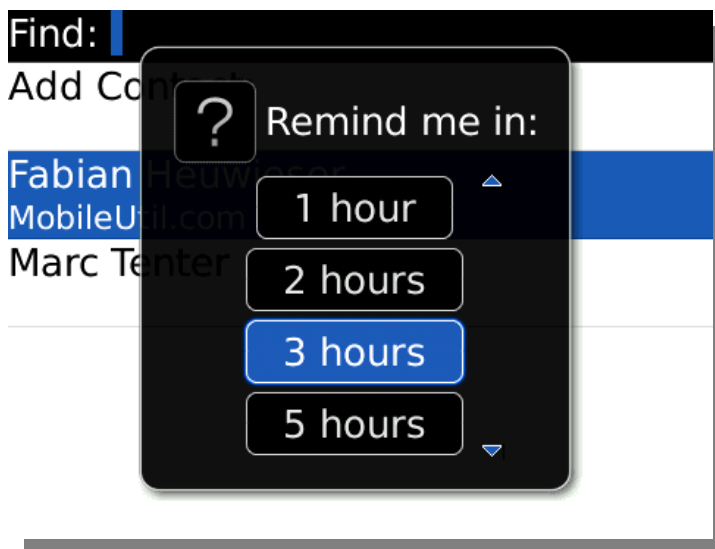

Select the Menu 'Remind me later!'

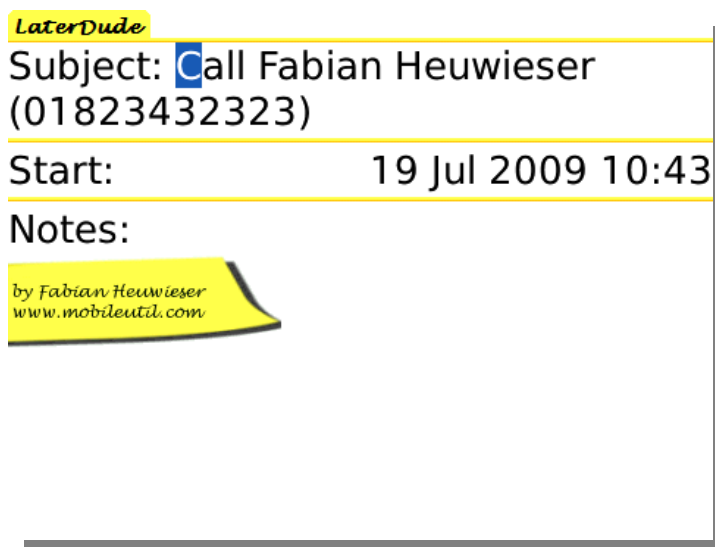

Select as what you want to get notified

Select which number of the contact you want to use

Set the time when you want to get notified

You now reached the main screen of the app. Set further information here and then click on the Return-Key (left of the Red Key) and select Save to save the calendar event.
