

LaterDude Pro

v2.2.xx

By Fabian Heuwieser

What is LaterDude Pro?

LaterDude Pro is an application that simply reminds you to call, SMS, contact, meet or email someone. The efficiency of it is that it interacts with the system and creates a new event in the internal calendar or task application

How do I use LaterDude Pro?

After installation, **LaterDude Pro** is available for use on your device. It puts an item into the System Menu called 'Later, Dude!'. You click this Menu to access the application.

You can access **LaterDude Pro** from everywhere, but if you are in the following applications then you can invoke the currently selected entries:

- Call Log (invokes the selected phone number)
- Messages/email Application (invokes the selected email message)
- SMS Application (invokes the selected SMS and Number)
- Address Book (invokes the selected Contact)

From these 4 applications you can select an entry to directly get its contents imported into the fields of **LaterDude Pro**.

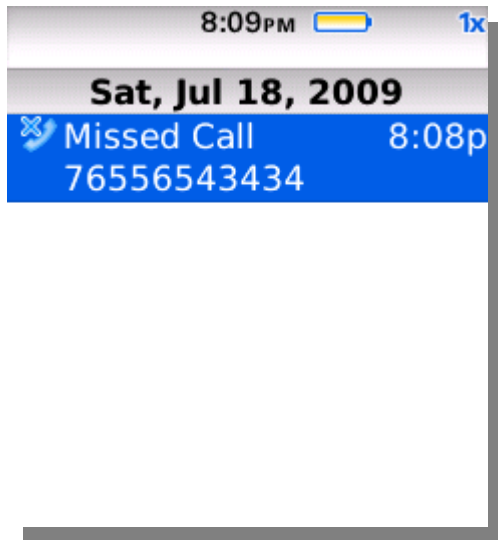

For example:

1. You want to get notified tomorrow that you have to contact your Doctor, you go into the Address Book, scroll to your Doctor's entry, press Menu -> Later, Dude! to set up a call-back reminder. The phone number and name is then already set in the **LaterDude Pro** application, you just save it and that's it. Simple and efficient!
2. A colleague sends you an email saying that you should contact him again in 1 week. You select the email message from the list, click Menu -> Later, Dude! and now you have the email address in the subject field, the body of the email in the notes and you only have to select when you want to get notified and it saves the entry into the Calendar.
3. You receive a call but don't have time at the moment. You tell the guy calling that you will call him back in 30min. You end the call, click the Green Button to bring up the Call Log, select the Number -> Menu -> Later, Dude! and select reminder in 30min and click save. In 30min your device notifies you to call back the guy.

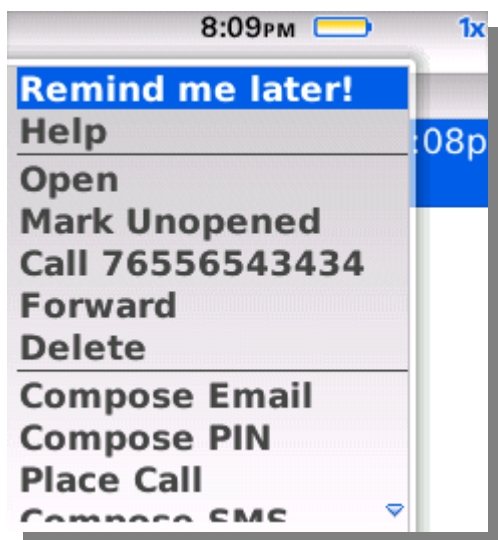

As you can see, LaterDude Pro can be used in so many different situations where it makes your life easier because you don't have to worry that you will forget something!

Screenshot-Walkthroughs

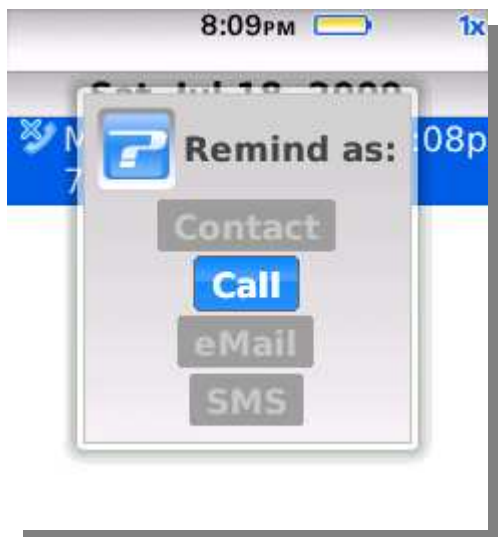

Via the Messages Application:

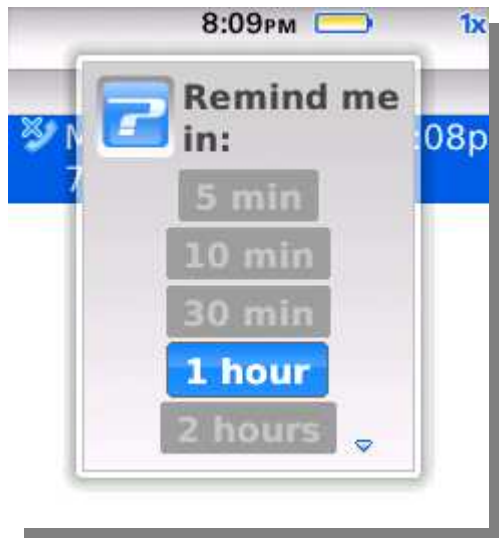

In the Message Application, select an Entry

The select Menu -> Later, Dude!

Select as what you want to get notified

Select the time when you want to get notified. You can still edit the time in the next screen in the Time-Selector.

LaterDude

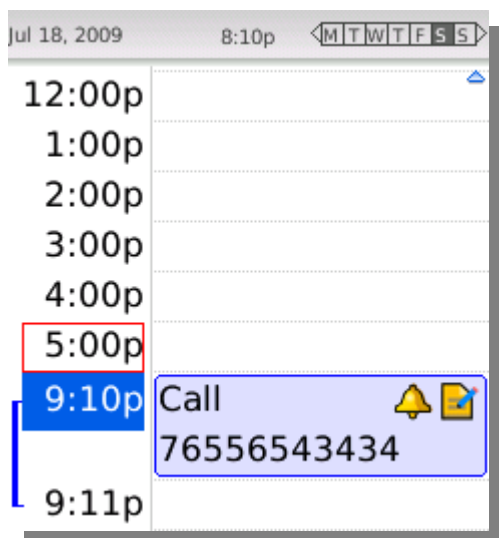

Subject: Call 76556543434

Start: Jul 18, 2009 9:10 PM

Notes: tell him about the new offer

www.mobileutil.com

Now in the LaterDude Pro Screen you can edit the fields with your values. You can still edit the time and date and the notes and when you are finished, press the 'Return' Key (left of your Red Key). Click on 'Save' and your Event gets added to the Calendar.

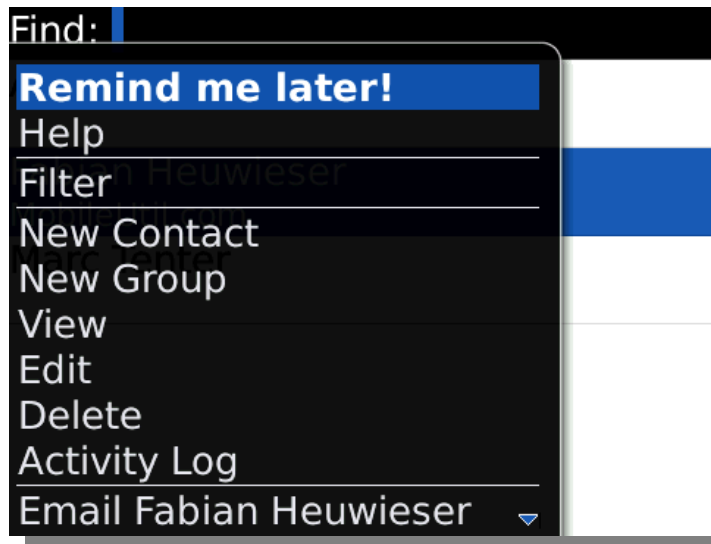

Here in the internal Calendar Application you can see the event.

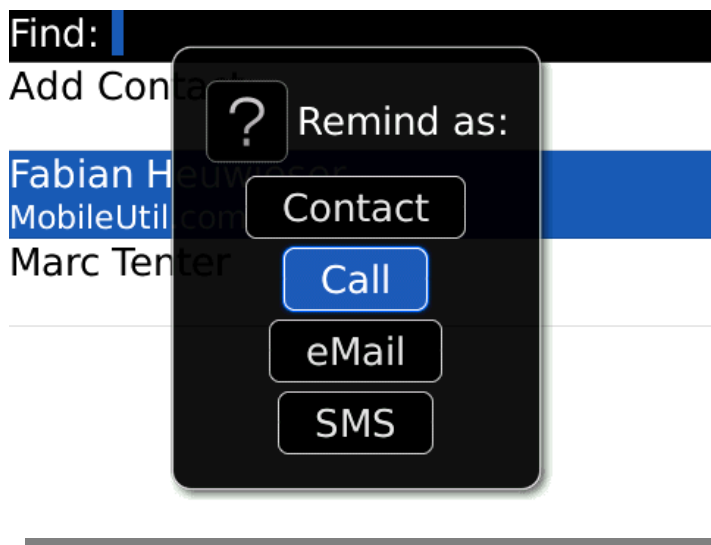

Via the Address Book:

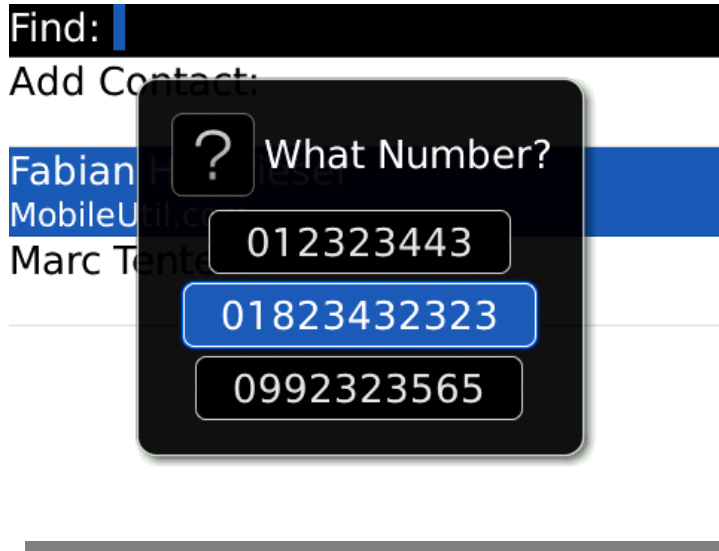

From the List of Contacts you can invoke the numbers

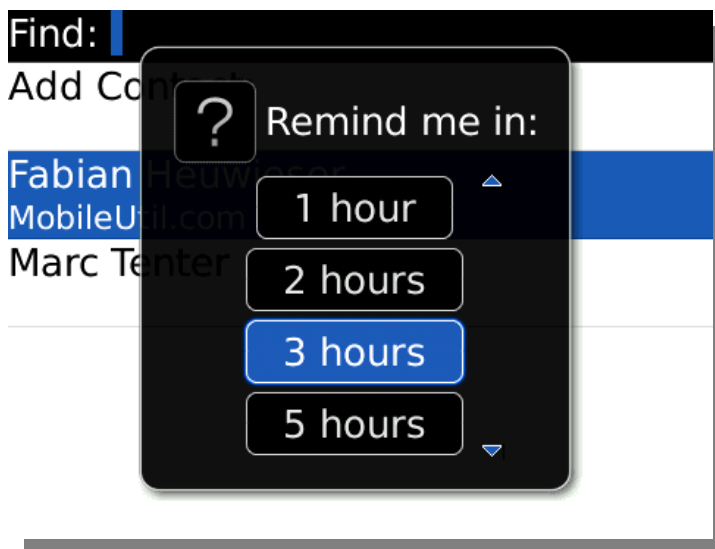

Select the Menu 'Later, Dude!'

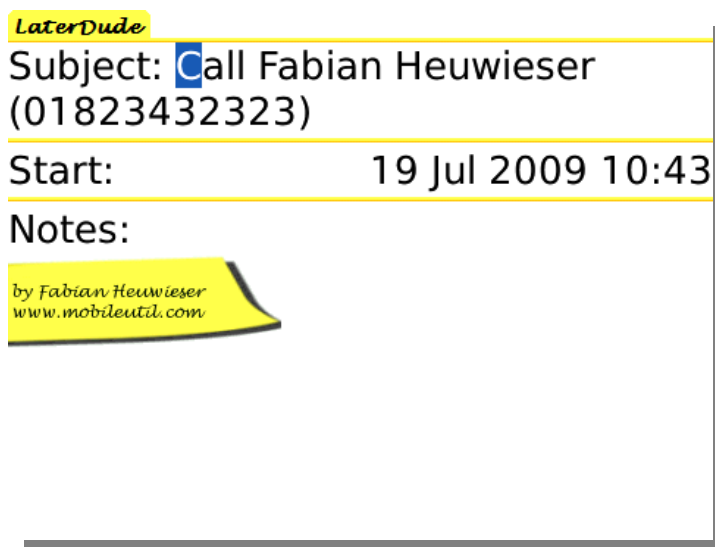

Select as what you want to get notified

Select which number of the contact you want to use

Set the time when you want to get notified

You now reached the main screen of the app. Set further information here and then click on the Return-Key (left of the Red Key) and select Save to save the calendar event.

Frequently Asked Questions:

- Did you set the permissions for the application to allow? Go to Options -> Advanced Options -> Applications -> **LaterDude Pro** -> Menu -> Set Permissions -> Set all to Allow -> Reboot the device now (battery-pull).
- The Call Log has to be displayed in the Phone Screen when you click the Green Phone Key. Set it here: Green Key -> Options -> General Options -> Phone List View: Call Log
- You need to make the following settings: Open up the Calendar, go to Menu and then Options. Then 'General Options', then go to 'Default Reminder' and set it to 0min so that the Reminder is always on 0min.
- When you want to register the application, you need a registration code. You receive that code when you buy the application or it is stated in the update-email that you receive when an update is available. If you did not receive an email about the update then please mail me at Fabian@mobileutil.com with your PIN and your Order Number.
- If you use the application on the Storm, you need to disable the compatibility mode. Go to Options -> Advanced Options -> Applications -> Select LaterDude Pro -> Menu -> Disable Compatibility Mode and restart the application.
